Risk and Philanthropy

through the Lens of Philanthropic Psychology

Jen Shang
Professor of Philanthropic Psychology

Philanthropic Psychology

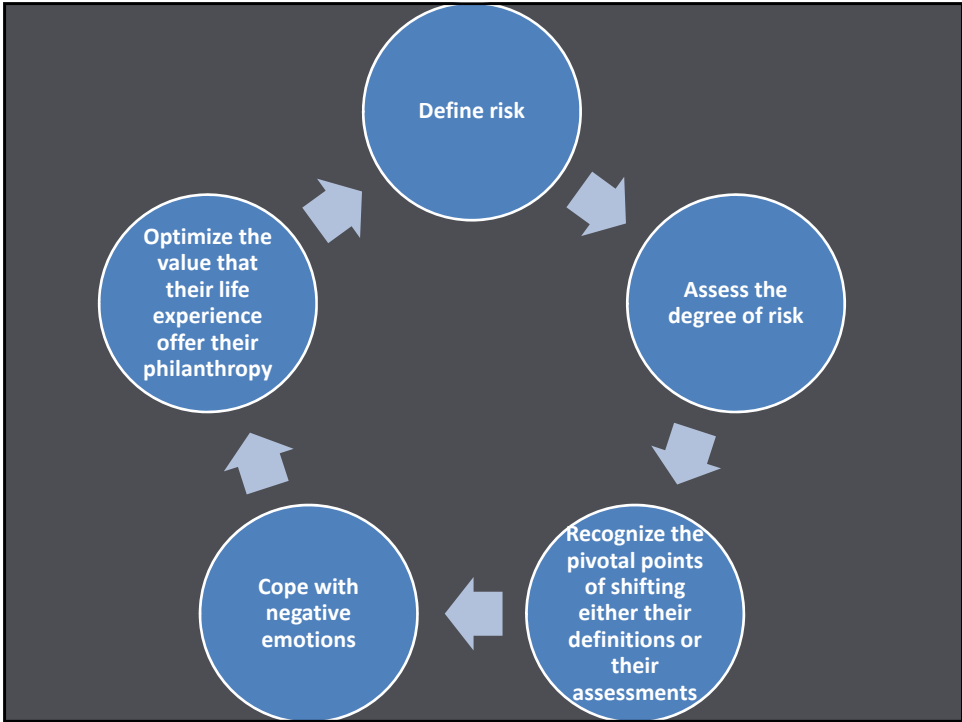

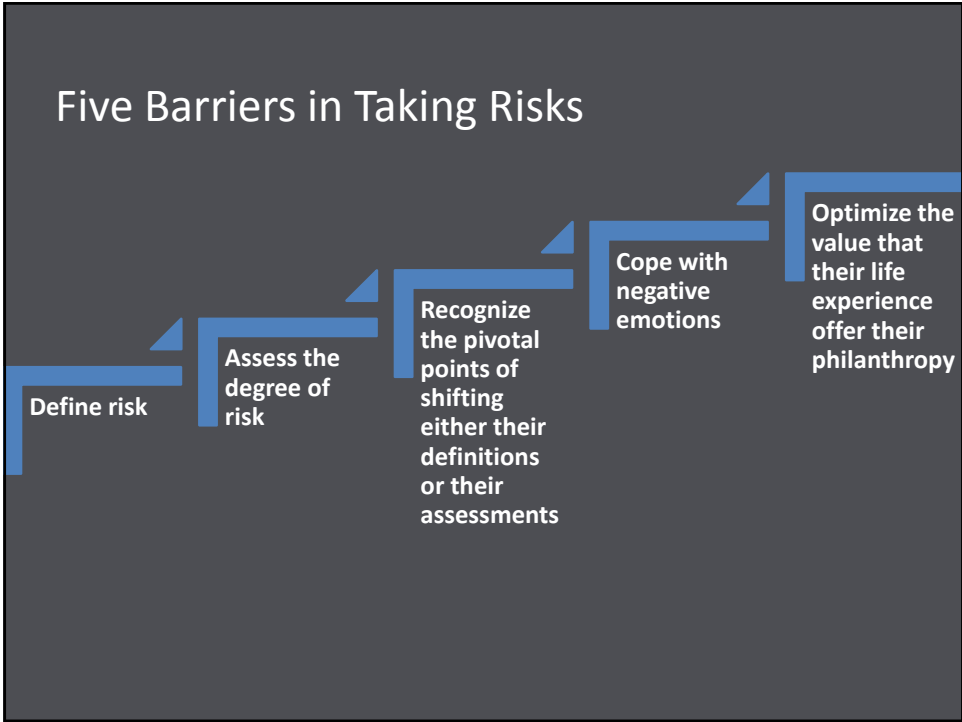

Risk and Philanthropy

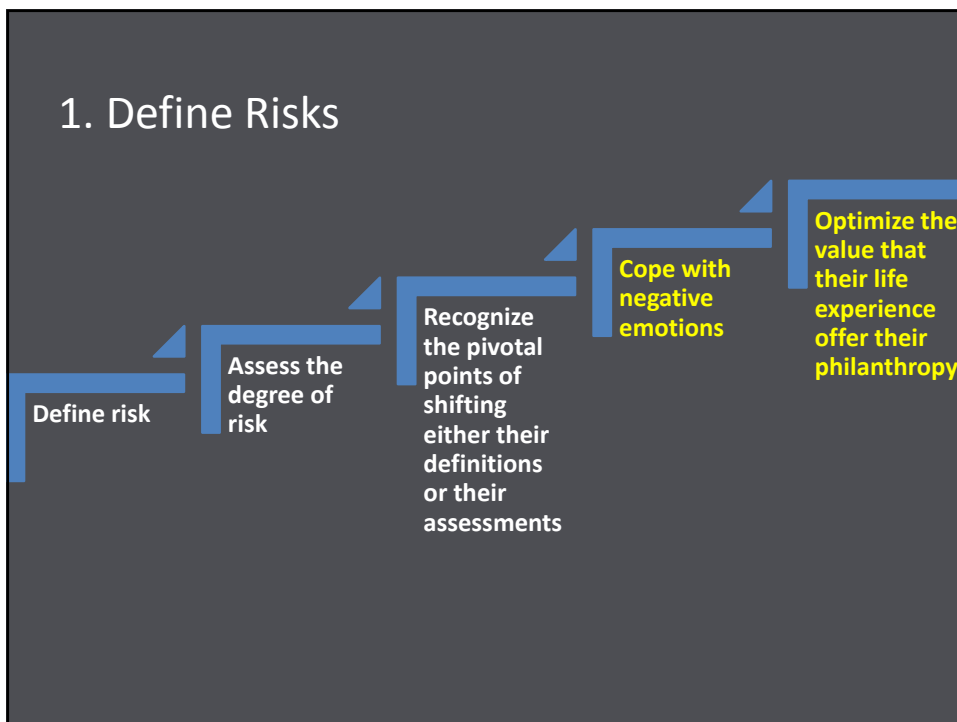

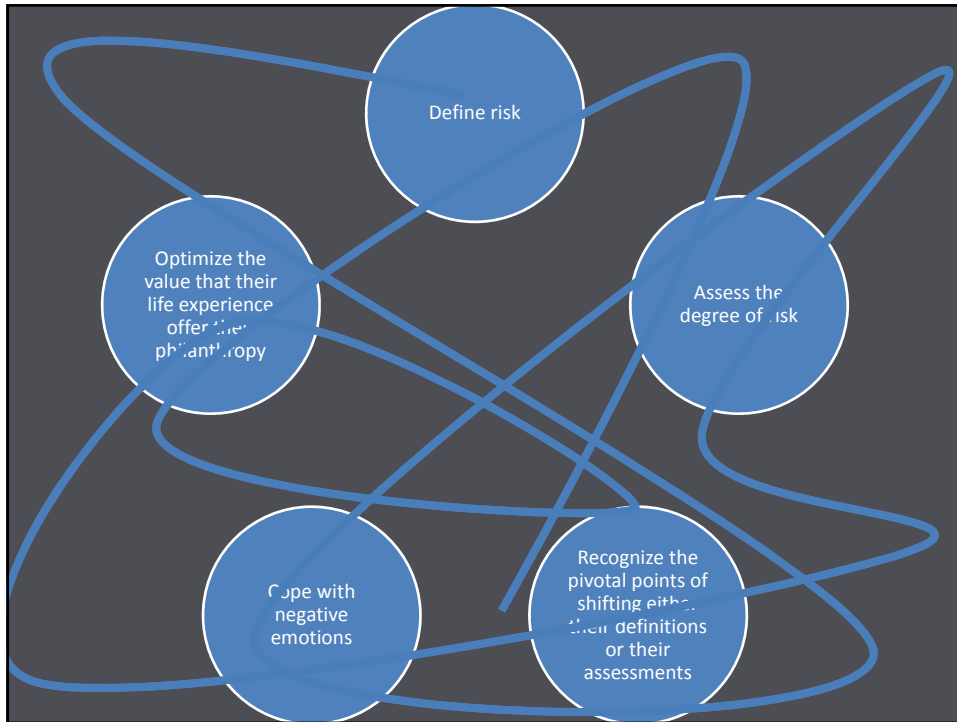

- Decoding-the-Discipline interviews (DtD)
(Pace and Middendorf, 2004)
- 22 international development philanthropists from Africa, Asia, Europe and North/South America

This Study

- Interviewees are asked to recall an experience where they deliberately took a higher than normal level of risk or where they had to cope with a difficult consequence of having taken a risky decision.

- Impact Risk

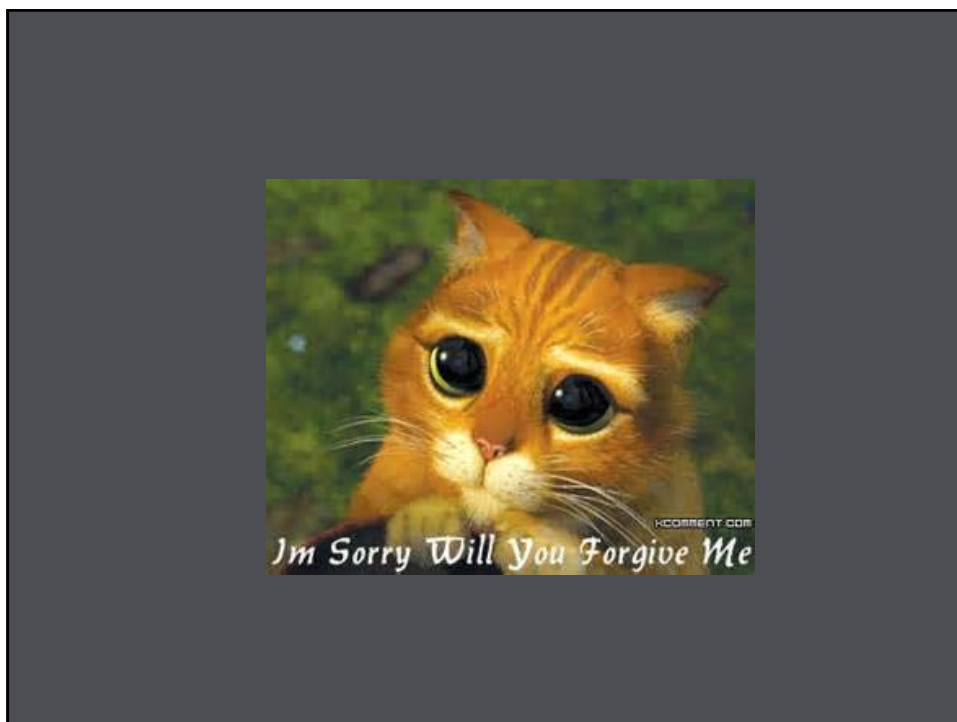

- Not achieving what one would like to achieve

Box 1: Example definitions of impact employed by our interviewees:

- 1) Achieving the sustainability of local businesses in Africa
- 2) Improving the quality of life for retail workers in an Asian country
- 3) Increasing the number of orphans who attend universities in an Eastern European country
- 4) Achieving buy-in by local communities to invest in educational funds in an African country.

Case 1:
Higher Education for Orphans

Philanthropic Psychology

- Operational Risk
 - Not having the right operational approach to support sustainable impact

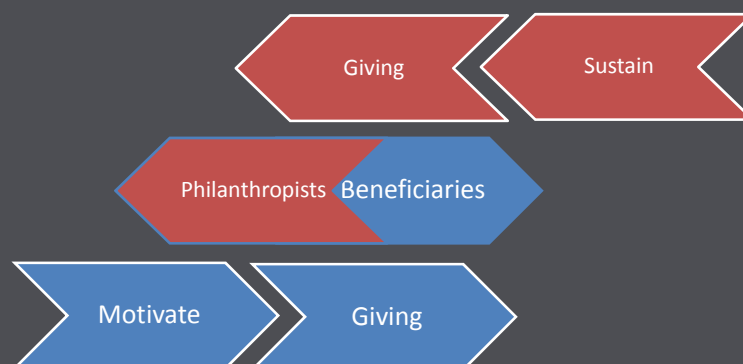

Box 2: Example operational risks encountered by our interviewees:

- 1) Finding the right people to engage in small and medium sized sustainable business in Africa
- 2) Identifying the right business model to sustain an uplift in quality of life for retail workers in India after the intervention is complete
- 3) Sustaining the operation of a nonprofit in the face of unfavorable tax law changes, so that orphans can attend university in Russia
- 4) Implementing adequate record keeping procedures to facilitate leadership succession in an educational investment fund.

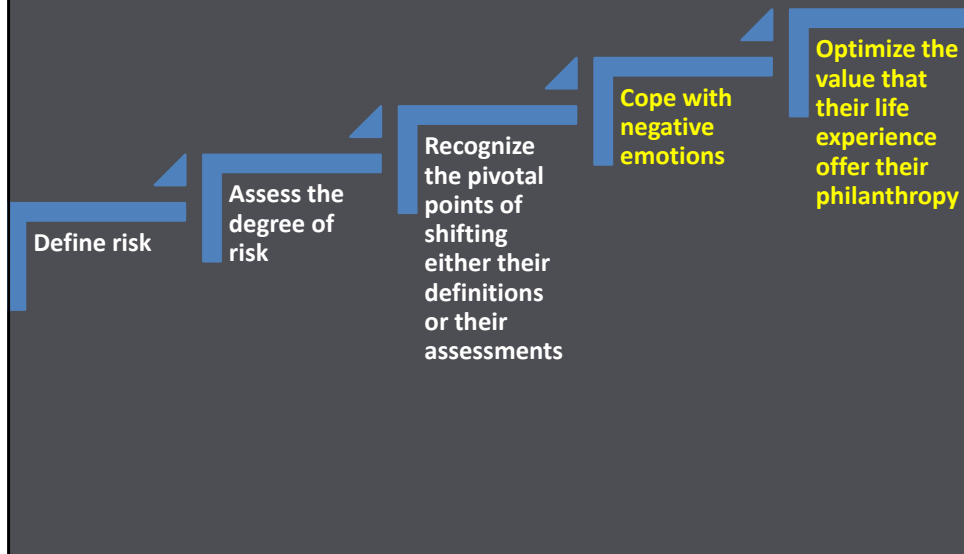

Case 2: A Private Foundation in Asia

A life of learning,
leading and returning...

Philanthropic Psychology

2. Assess the degree of risk

Anchoring-and- **UNDER** Adjustment

ANCHOR...

ADJUST ...

- a) How easy or hard it might be to define success
- b) The extent to which there is agreement about how to measure that success
- c) How easy or hard it might be to conduct the relevant measurements
- d) The timescales over which the measurements must be conducted
- e) How risk-diverse their philanthropic portfolio might be
- f) The extent to which a given investment might fit with their philanthropic profile
- g) The size of the focal philanthropic investment
- h) Past experience working with the relevant community and/or stakeholders.

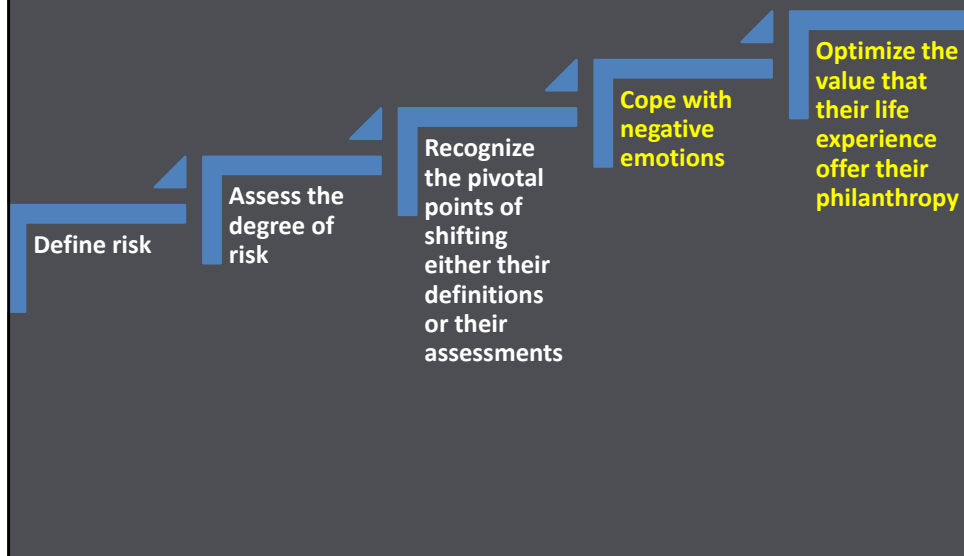

But...

may not be enough...

That is when philanthropy
can get really lonely...

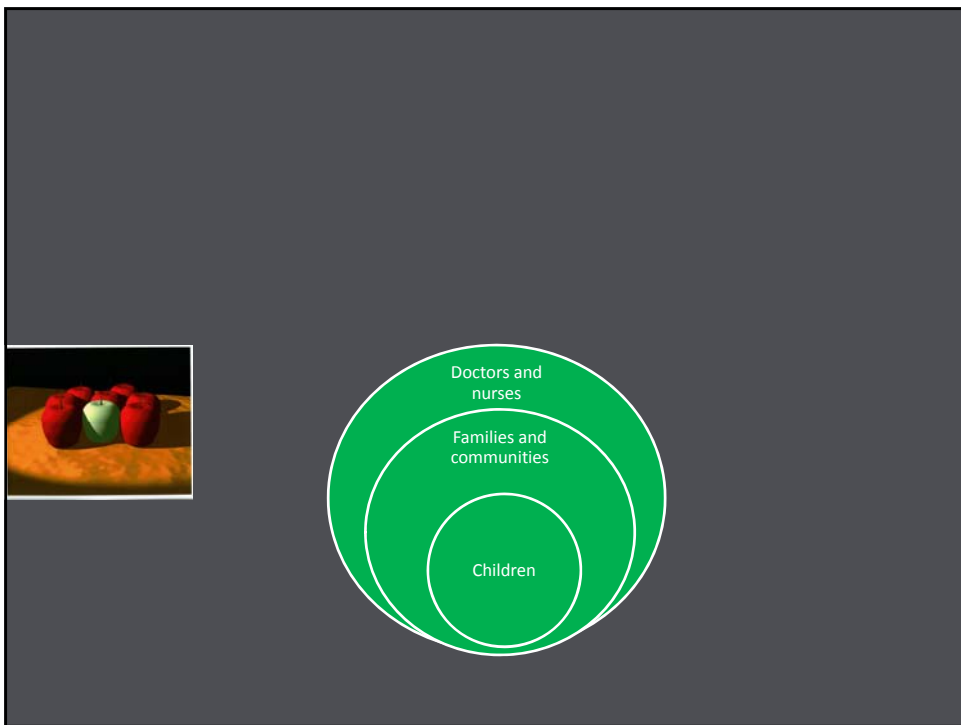

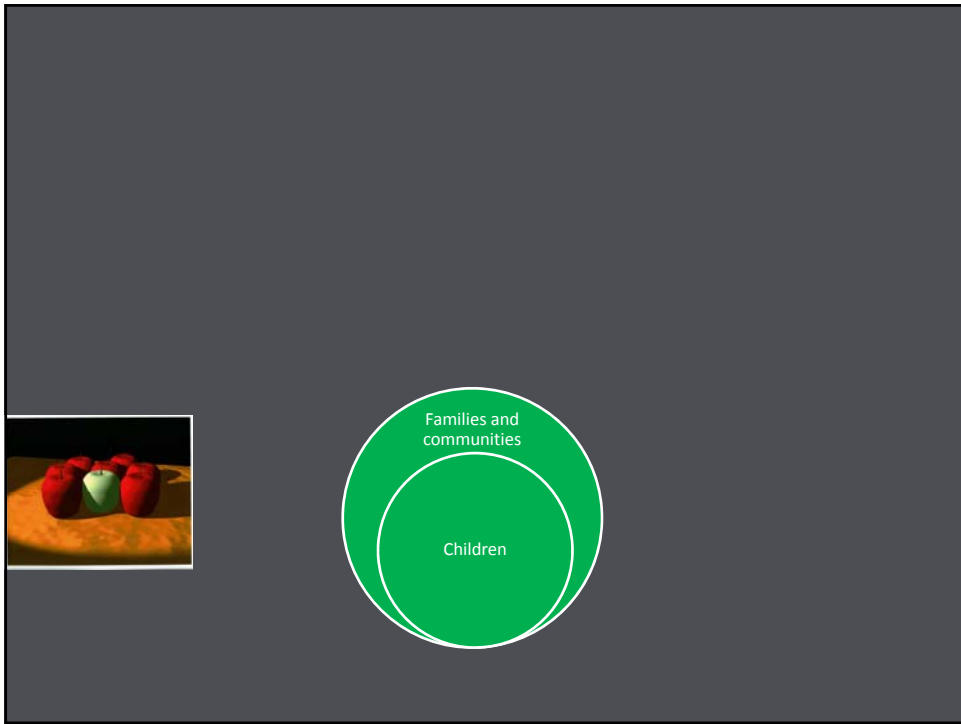

3. Recognize the pivotal points of shifting either the definitions or the assessments

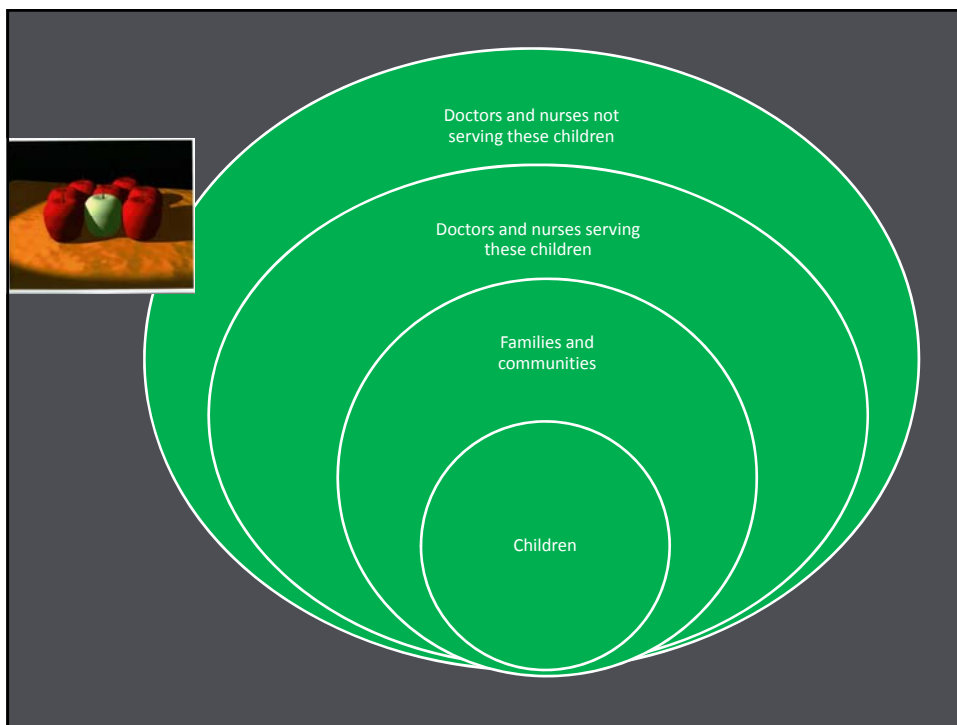

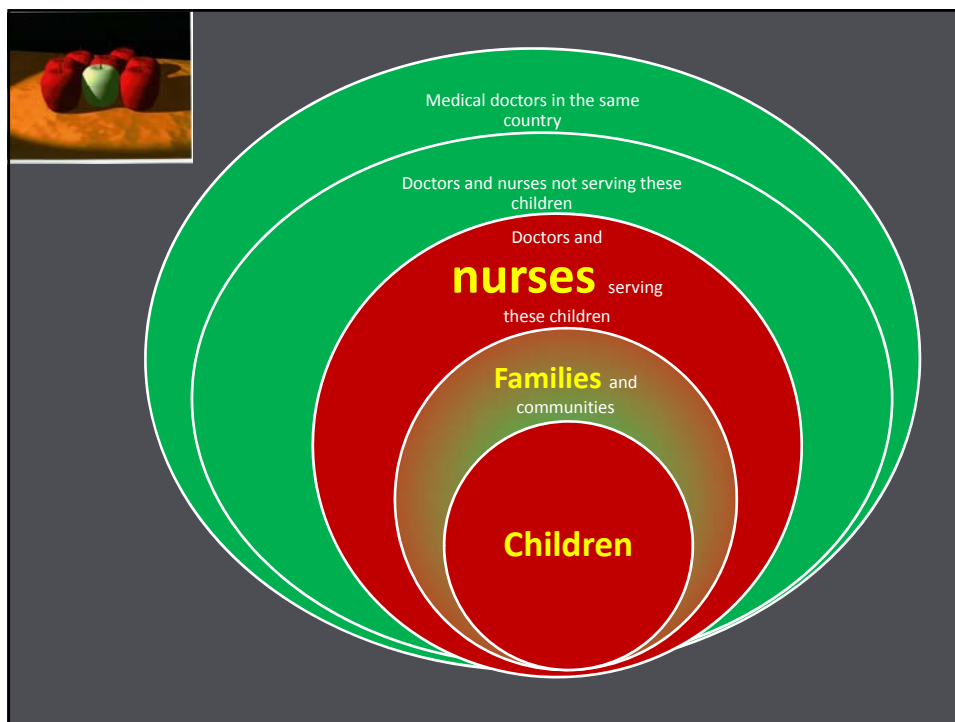

Case 3

A children's hospice

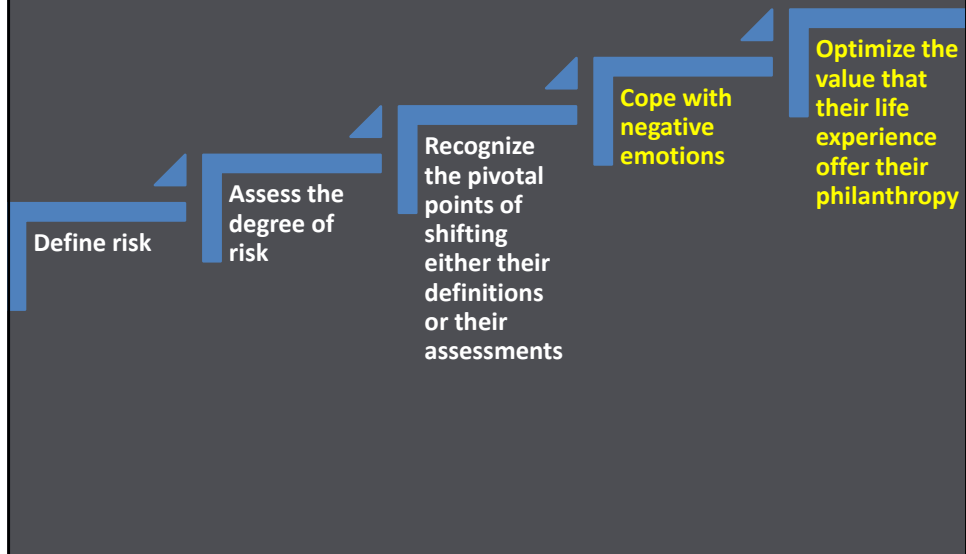

Risk and Philanthropy

- Accessible Outcomes → Systemic Change
- Fixed Strategy → Iterative Strategy
- Beneficiaries → System of Stakeholders

Summary of 4 and 5

Add A Partner in the Mix

Box 5: Factors changing a philanthropist's mindset from 'why take a risk to why not take a risk

	'Only you I can help...' Is it believable?	Why take a risk?/Why not take a risk?
1) A target amount (of funding)	No	Why yes?
2) A passion for a cause	No	Why yes?
3) A relevant set of social connections	Maybe	Why yes?
4) A contextualised understanding of the impact	Maybe	Why yes/not?
5) A set of skills, knowledge and competences relevant to reducing operational risk	Maybe	Why yes/not?
6) A set of skills, knowledge and competences relevant to achieving impact through defining strategy	Yes	Why yes/not?
7) It would be a waste if I don't use my skills, knowledge, and competences to achieve impact I am passionate about		Why not?

Given philanthropy is

- Risky
- Tough
- Intellectually challenging
- Emotionally draining and
- Sometimes, unbearably lonely...

- Why don't people give up???

Box 4: Solving problems in philanthropy is fun

'I am really good at problem solving. A lot of social problems are really difficult to solve, and no one has been able to solve them before. My philanthropy offers me the opportunity to stretch my problem-solving skills to a place where they have never been stretched before, and that is exciting and fun.'

Causal Evidence
on
Giving and Moral Identity

Field and Quasi-Lab Experiments

Experiment 1 - Procedure

- Design
 - 2 (priming by control) x 2 (male by female)
 - Priming
 - Thank you for being/becoming a compassionate, kind, caring, friendly, helpful (randomly selected two out of the five words) STATION_NAME member.”
 - Control
 - Thank you for being/becoming a STATION_NAME member.”
- Participants
 - 147 males and 280 females
 - 129 in the control condition and 369 in the experimental condition
 - 366 New members and 134 renewal members
 - 477 one-time payment and 24 installments.
- Procedure
 - Dependent Variables: “How much would you like to contribute today?”

Experiment 1 - Results

Study 2 - Procedure

- Participants:
 - 166 male and 207 female students
- Procedure
 - Moral Identity Pre-Measure
 - Donation Scenario
 - Moral Identity Post-Measure
 - Dependent Variables:
 - Post-Measure Moral Identity Discrepancy

Giving Intention
Shrinks Moral Identity Discrepancy
More Strongly in Females than in Males
