Work, Sustainability, Geopolitics and Social Policy 16
 Panel Discussion

Closing Keynote 17

Catering in HKU Campus 20

“By 2050 the world’s population is expected to reach 9.8 billion. Nearly 70 percent of this booming population - 6.7 billion people - are projected to live in urban areas.”

The Cities issue of National Geographic magazine (April 2019) - From mega-regions to micro-size home: Cities of the future

Faculty Research Cluster Cities 2050: Urbanisation, Sustainability and Mobility

The world is rapidly urbanising. As the age of the Mega-City unfolds, there is a huge opportunity to be a world-leading centre of research on where cities are going in the next 35 years and beyond. Hong Kong is one of the world's great cities, and it stands on the edge of the extraordinary Guangdong-Hong Kong-Macau Greater Bay Area. This region provides an unsurpassed environment in which to study cities in all their complexity. The Cities 2050 research cluster will focus on future cities, city-regions and city networks, both regional and global, and specifically in four areas: (1) Urbanisation, (2) Sustainability, (3) Mobility and (4) Governance. The mission of the cluster is to conduct leading social science research on developing smart and sustainable urban and mobility systems that are resilient, resource-efficient, environmentally friendly, and technology-enabled, and to understand how cities adapt to mass migration, health challenges, climate change, and economic expansion/contraction.

About the Symposium

What might the world of work look like in 2050, and what is the relationship between the transformations and futures of work, urbanisation, changing urban forms and economies? There has been considerable debate about the nature, patterns and consequences of mega-urbanisation, migratory movement, urban forms linked to and produced from technology, and their impact on social relations, spatial inequalities, and individual wellbeing in the context of work. Asia and Africa currently have the highest rates of urbanisation. China and India have strived to seize the urban moment, legitimize the building of hundreds of new cities as national economic priorities; in particular, China has aimed to move nearly 300 million more people into 'green, smart and sustainable' metropolises by 2030. 'Smart' cities, or variants of this urban form, exemplify utopian ideals of technology-driven efficiency and innovation. Yet technologies embody specific forms of power and authority, and the role of technology and the world of work has a long history which is dynamic and contested. Will the new waves of technological advancement – such as artificial intelligence (AI), robotics and digital platforms – radically change the meanings of work and the place of work in people's lives? Will the social dimensions, processes and conditions of work be altered by technology and the changing nature of the urban, and if so how? Will new technologies eventually bring about a utopian 'post-work' society where humans are free from work, smart cities become sustainable, and the deep-seated problems of inequality, exploitation and environmental degradation disappear? Or will people become redundant as AI outperforms our physical and cognitive abilities, creating unforeseen socio-economic and environmental harms?

This international symposium will bring together an array of UK, Asia and Australia-based world-class social science scholars, to dialogue and critically reflect on the rapidly changing dynamics and multi-faceted effects of urbanisation, climate change, technological change and mass migration in the context of work. The symposium also will uniquely span across divergent academic disciplines and geographical and social contexts, offering new insights into the social relations and problems derived from the emerging worlds of work, the changing nature of the urban, and the intensifying complexity of cities across the global North and South divide.

Keynote Presentation

The Worlds of Work: Past, present and future in Work, Employment and Society

September 9, 2019 | 9:15am - 10:15am
Social Sciences Chamber

Professor Eleonore Kofman

Professor of Gender, Migration and Citizenship
Department of Law & Politics, Middlesex University
Visiting Professor, Institute of Global Affairs
London School of Economics
Joint-Editor-in-Chief, *Work, Employment and Society*

Abstract

The presentation reviews the past and present contributions and suggests some future directions of publications in *Work, Employment and Society*. One of the key areas covered is that of migration, which has major implications for urbanisation, the world of work and the right to the city. For example the outstanding article by Sarah Swider, which was awarded the 2016 WES prize for best article in the previous year, critically analysed building China and the diverse nature of precarious employment and labour markets among migrant construction workers. In doing so, she drew attention to the continuing significance of internal migration, usually marginalised by scholars in the Global North, but which remains highly significant in the Global South in shaping cities.

Moderator

Professor Maggy Lee

Keynote Presentation

The future of work and automation: Why employment is good for you in small doses

September 9, 2019 | 1:45pm - 2:45pm
Social Sciences Chamber

Dr Brendan Burchell

Reader, Department of Sociology, University of Cambridge

Abstract

By 2050 machine-learning and robotics technologies promise to be able to replace some tasks or whole jobs that have traditionally been performed by humans. Like previous technologies introduced in the past couple of centuries, this possibility has been met with either optimism that will permit liberation from the tyranny of employment, or pessimism that it will lead to mass precarity and unemployment. This lecture will present qualitative and quantitative evidence to explore the possible societal consequences of a radical reduction in the length of the normal working week. It will draw upon the evidence for the economic, sociological and psychological literatures on employment. It will be argued that paid work does have important benefits beyond the wage, but the minimum effective dose of employment for such benefits may be as little as one day per week. The paper also considers why the historical increases in productivity have not been matched with proportionate reductions in working time.

Moderator

Dr Tommy Tse

Assistant Professor, Department of Sociology, The University of Hong Kong

Keynote Presentation

Encountering automation: Storying technological change for future cities

September 10, 2019 | 9:30am - 10:30am
Social Sciences Chamber

Dr David Bissell

Associate Professor and ARC Future Fellow
School of Geography, The University of Melbourne

Abstract

Politically and economically, the future of resource work is currently high on the agenda in many countries. In Australia, for instance, this year's general election revolved around the promise of jobs in this sector for regional communities. Yet the intensification of automation is rapidly changing this sector, with potentially far reaching implications for the people and places involved. In this paper I explore the changing nature of work in the resources sector in Australia where increased automation means that an increasing proportion of jobs are moving from regional to urban centres. Where much writing on the future of automation is characterised by either boosterist or dystopian narratives, in this paper, I turn to overlooked questions of embodiment to complicate these narratives. Through fieldwork with workers differently positioned in the resources sector, I speculate on how automation becomes differently disclosed through the aesthetic dimensions of encounters. I explain the political and ethical value of admitting ambiguity, incoherence and confusion as qualities of our relations with technological change.

Asymmetric Cities

September 10, 2019 | 4:00pm - 5:00pm
Social Sciences Chamber

Professor Caroline Knowles

Professor of Sociology, Goldsmiths, University of London
Director of Cities and Infrastructure Program, British Academy

Abstract

If current trends continue the cities of 2050 will be more still more asymmetrical. In this lecture I will present some examples of attempts at alleviating asymmetries in urban life in the research and success stories of the British Academy's Cities and Infrastructure Programme. The seventeen research projects comprising this programme involve interdisciplinary research in poor and popular neighbourhoods in some of the world's fastest growing cities in the global south. I will also present some of my own research into the impact on cities of extreme concentrations of wealth. Plutocratic cities, shaped in the everyday ecologies of wealthy life, and lived by the masses, are profoundly asymmetrical. Extreme accumulations of wealth not seen in a century now shape London and other cities too. Asia produces more new millionaires than any other region. Cities like London are an unfolding experiment in the consequences of the coexistence of want and wealth. This makes research into the substance of wealth and the mechanisms creating it in the fortunes, lives and habitats of plutocrats an urgent priority. Drawing on my research on London's plutocrats, this lecture presents two street view vignettes. One is drawn from the city's financial machine. The other explores the domestic investments of wealth in a London neighbourhood. From these street views I argue that there are intellectual and political benefits in understanding cities through close encounters with the infrastructures of wealth generation and consumption.

Master of Social Sciences in Media, Culture and Creative Cities [MSocSc(MCCC)] is a two-year part-time programme which has been offered by the Department of Sociology at the University of Hong Kong since 2013. It employs a social science evidence-based approach to understand the central role of media, culture and creativity in a world city context, with a special emphasis on Hong Kong, China, and the Asian region. It provides academic and professional training for students and practitioners in the fields of media, culture, and creative industries.
