

## **AI Literacy, Ethics AI and Responsibility AI**

This presentation explores the foundations of AI literacy, the importance of ethics in artificial intelligence, and the shared responsibility of AI development and use. As AI becomes increasingly integrated into education, work, and daily life, understanding its capabilities and limitations is essential for informed participation in society. We will discuss the principles of ethical AI, including fairness, transparency, accountability, and inclusivity, while examining real-world challenges such as bias, privacy, and unintended consequences. Finally, the presentation highlights the collective responsibility of developers, institutions, policymakers, and users to ensure that AI technologies are designed and applied in ways that promote human well-being, equity, and trust.
