

## **JC-WISE "My River, My Community" Scheme Workshop and Guided Field Trip to Ng Tung River Catchment**

Meandering through the North District, Ng Tung River is one of the major watercourses in Hong Kong. With two irrigation reservoirs built at the upper course, the river has played a crucial role in agriculture. Since it provides important ecological functions, three sections of Ng Tung River have been designated as Ecologically Important Streams. This programme comprises a workshop and a field trip, and is designed to provide teachers and NGOs staff with in-depth knowledge of Ng Tung River as well as Hong Kong's rivers in general.
