Citizen Science for Environmental Education in Hong Kong Freshwater Systems: Challenges, Strategies, and Opportunities

Dr. Ken So

Education & Research Manager

kenso@owlhk.org

Nurture via Nature

Citizen Science

- Enables large-scale data collection (both spatially and temporally)
- Informs natural resource management, environmental protection, and policymaking
- Fosters public input and engagement for environmental education

CROWD POWER

The SciStarter repository has been documenting the rise of citizen-science projects and events. The field is largely decentralized, which makes such efforts hard to track. Dates on this chart reflect the year in which the initiatives were added to SciStarter's records.

Failures of Engagement: Lessons Learned from a Citizen Science Pilot Study

Citizen Science

- Feasibility
- Data quality & quantity
- Level of public engagement
- Ethical issues
- Harm to sensitive natural resources
- etc

Clear goals and objectives to match the needs for science and public involvement

ECF: Discovering South Lantau Invertebrates

Lantau Freshwater Ecology Classroom

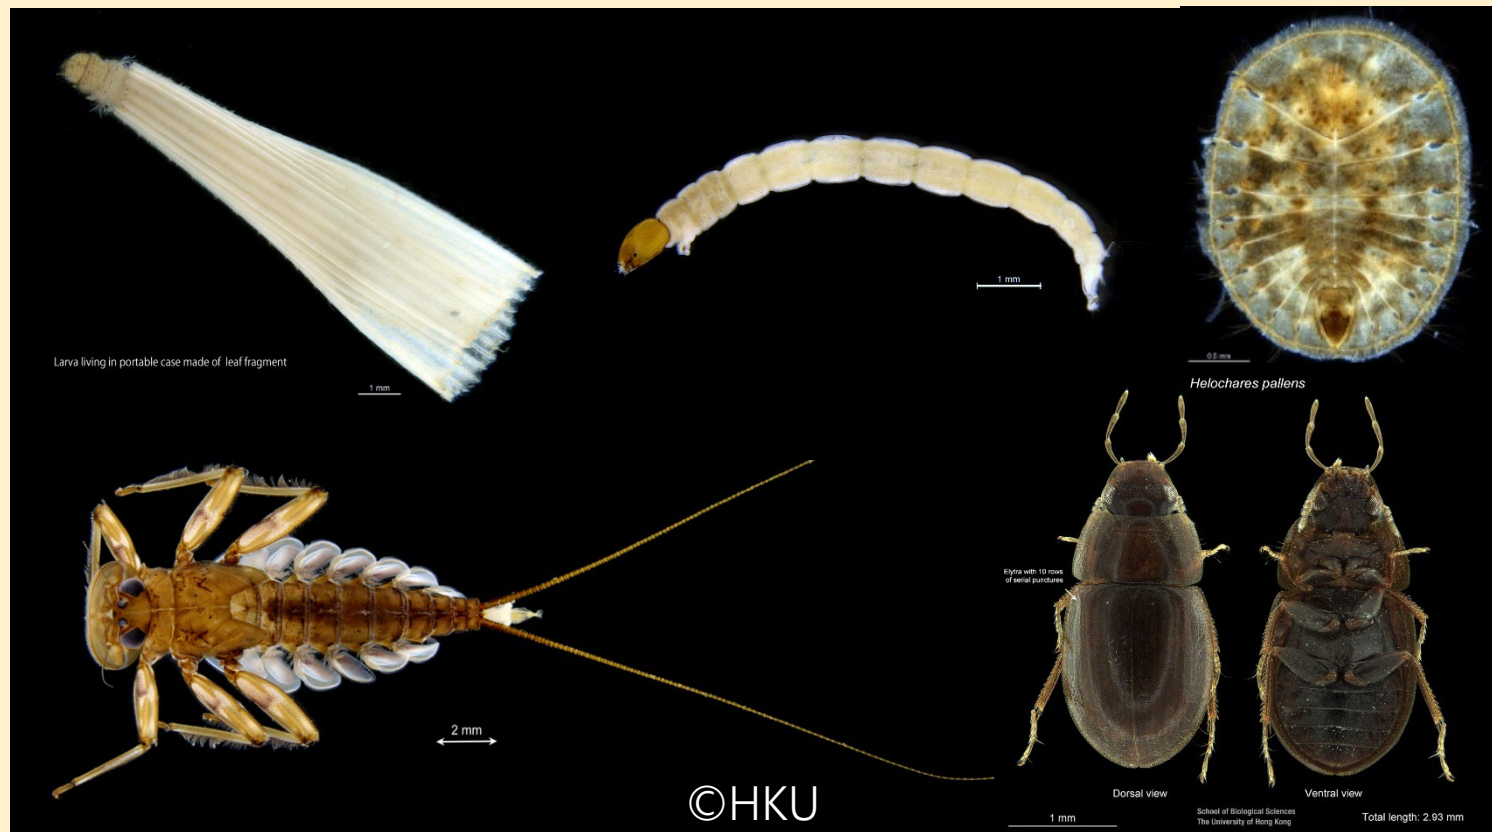

Objectives & Aims

1. To increase the awareness of and interest in freshwater invertebrates among the general public
2. To promote and enhance the knowledge of freshwater ecology among the general public
3. To provide baseline ecological data for freshwater habitats in Lantau

Challenges

Hong Kong Freshwaters

- Most accessible habitats (e.g. streams & marshes) are dominated by aquatic macroinvertebrates

Aquatic Macroinvertebrates

1. **Lack of expertise** – very few freshwater ecologists familiar with aquatic macroinvertebrates
 - Lack of professionals
 - Education Efficiency & Feasibility ↓

Aquatic Macroinvertebrates

2. **Lack of opportunity** – very limited workshops/ courses/ activities/ research

- Lack of awareness
- General public has no prior knowledge
- Public engagement & Data quality ↓

Aquatic Macroinvertebrates

3. **Lack of baseline data** – no baseline data for many of the wetlands/ streams

- Lack of database & tools
- Education efficiency ↓

Aquatic Macroinvertebrates

4. **Lack of awareness** – small & inconspicuous: aquatic invertebrates are not charismatic to the general public!

- Hard to observe
- Feasibility, Education efficiency, Public engagement, & Data quality ↓

Strategies

1. Public seminar as a start

- Outline the importance of FW invertebrates
- Increase public awareness

大嶼山淡水生態教室 公開講座及計劃簡介

日期: 2019年9月7日 (星期六)
時間: 下午二時至五時
地點: 香港理工大學 TU107
語言: 廣東話
費用: 免費
名額: 50人

截止報名日期 2019年8月31日
費用全免, 名額有限, 先到先得!

講者及講座主題:

1. 沈鼎榮先生 (香港戶外生態教育協會 創辦人及保育總監)
大嶼山淡水生態教室計劃簡介
2. 梁士倫博士 (香港浸會大學國際學院應用科學學部 講師)
河溪生態及大型無脊椎生物
3. 蘇英健先生 (香港大學生物科學學院 博士研究生)
大嶼山淡水沼澤生態

沈鼎榮先生 梁士倫博士 蘇英健先生

Strategies

2. Recruit tertiary students and provide training, equipping them with the knowledge to be tutors (train-the-trainer)
 - 5-day training, including lectures and field trips for 20 students
 - Responsible for leading subsequent citizen science activities
 - Capacity building of citizen scientists and extended participants

Strategies

3. Make use of/ develop tools to enhance education efficiency

- Field microscope
- Field guide
- Apps

Strategies

4. Involving participants to involve in design and decision making of the programs
 - Group assignment to design innovative games for knowledge transfer
 - Reduce feelings of exploitation

Strategies

5. Tests to assess their level of understandings
 - Ensure data quality in subsequent citizen science activities

Strategies

6. Minimize environmental impacts

- Limit the number of participants
- Stone method instead of kick sampling
- Educate the correct attitudes
 - Release organisms back to where they were found
 - Organism collection should only be allowed for education, research and conservation purposes
